

- **12 HOLE DIAMOND DRILL PROGRAM COMPLETED ON RYAN LAKE MOLYBDENUM-COPPER ZONE 1,000 FEET NORTH OF MILL**
- **DRILL RIG MOVED TO TEST COPPER-MOLYBDENUM SHOWING 2 MILES NORTH OF MILL**

Toronto, Ontario Canada, December 6, 2005.

Pacific Comox Resources Ltd. (TSX-V:PCM) reports that a diamond drilling program of 12 holes totaling 1,089 meters (3,570 feet) has been completed in the area of the past producing molybdenum open pit on its Ryan Lake property at Matachewan, Ontario. Assays are pending. This drilling is a follow-up program to more fully delineate the zone intersected by the two holes for which the assays were reported on September 21, 2005.

The two diamond drill holes were made from one setup on the floor of the past producing molybdenum open pit to test for mineralization in the southwest and northwest pit wall areas. The two holes returned the following results:

Hole PC-05-06 returned an intersection of 149ft from 3ft, grading 0.060% molybdenum (1.3 lbs/tonne) and 0.04% copper (0.9 lbs/tonne). The hole ended in mineralization.

Hole PC-05-07 returned an intersection of 105ft from 25ft, grading 0.079% molybdenum (1.7 lbs/tonne) and 0.08% copper (1.7 lbs/tonne). The hole intersected weakly mineralized andesite at 130ft.

Including the previous two holes the Company has now completed 14 holes on this zone totaling 1,182 meters (3,875 feet). This zone is located about 1,000 feet north of the currently operating mill and the past producing underground copper/molybdenum mine on the property.

The drill rig has now been moved to test an outcrop of copper-molybdenum mineralization about one mile north of Log Lake, or about two miles north of the Ryan Lake mill on the claims under option to Pacific Comox reported on October 13, 2005.

The program is managed by James Janzen V. P. Exploration for Comox. Under N.I. 43-101 the QP for the program is Robert Hill P. Eng.. Assaying has been and is currently being done by Swastika Laboratories Ltd. at Swastika, Ontario.
